# GAME READY CLINICAL COMPENDIUM

|                                      |    |
|--------------------------------------|----|
| Shoulder                             | 4  |
| Spine                                | 6  |
| Hip & Leg                            | 8  |
| Knee                                 | 11 |
| Recovery & Athletics                 | 18 |
| Science                              | 21 |
| Safety & Adverse Events              | 25 |
| Review Articles & Clinical Education | 27 |

The Clinical Compendium consists of a literature summary surrounding the use of the GAME READY GRPro 2.1, Med4 Elite, and predicate devices. It is an abridged list of studies, and readers are advised to review all relevant sources for complete information. Study summaries are organized by patient population and include a link to the abstract on PubMed (National Library of Medicine).

## SELECTION CRITERIA FOR STUDY SUMMARIES:

- GAME READY published literature in peer-reviewed journals
- Study designs:
  - Prospective
  - Retrospective
  - Meta-Analysis
- Studies available in the English language
- Exclusion criteria:
  - Poster presentations
  - Abstracts
  - Study protocols
- Categories:
  - Studies by anatomical location
  - Recovery & athletics
  - Science
  - Safety & adverse events
  - Review articles & clinical education

This compendium is a balance of favorable, neutral, and unfavorable studies proportional to the number published in the literature.

## ABBREVIATIONS:

- **ACL** – Anterior Cruciate Ligament
- **CC** – Cryo-Compression
- **DOMS** – Delayed-Onset Muscle Soreness
- **KOOS** – Knee Injury and Osteoarthritis Outcome Score
- **ROM** – Range of Motion
- **THA** – Total Hip Arthroplasty
- **TKA** – Total Knee Arthroplasty
- **VAS** – Visual Analog Scale

## READING THE CLINICAL COMPENDIUM: A SAMPLE GUIDE

| Author                      | Year Published   | Journal       | Type               |
|-----------------------------|--|---------------|--------------------|
| Lead Author Last Name       | Publication Year   | Journal Title | Type of Manuscript |
| <b>Title</b>                | <i>Full Title of the Manuscript</i>  |               |                    |
| <b>Publication Overview</b> | A background in what the study was investigating or discussing                   |               |                    |
| <b>Summary Points</b>       | Take-home points that are supported by the data contained within the publication |               |                    |
| <b>Link to Manuscript</b>   | Link   |               |                    |

In the corner, you will see one of the following icons, which indicate if a study directly mentions GR, CC devices, or contrast therapy devices.

Study uses a GR device (no specific model called out)

Study investigates CC devices with no manufacturer named

Study that reviews contrast therapy devices with no manufacturer named

# SHOULDER

# SHOULDER

| Author                      | Year Published   | Journal                               | Type                        |  |
|-----------------------------|--|---------------------------------------|-----------------------------|---|
| Kraeutler                   | 2015   | Journal of Shoulder and Elbow Surgery | Randomized Controlled Trial |   |
| <b>Title</b>                | <i>Compressive Cryotherapy Versus Ice-A Prospective, Randomized Study on Postoperative Pain in Patients Undergoing Arthroscopic Rotator Cuff Repair or Subacromial Decompression</i>                                       |                                       |                             |   |
| <b>Publication Overview</b> | Study to compare the efficacy of CC therapy versus ice on postoperative pain in patients undergoing shoulder arthroscopy for rotator cuff repair or subacromial decompression.   |                                       |                             |   |
| <b>Summary Points</b>       | No significant post-operative pain relief benefits were found in patients who used CC therapy versus ice. No significant differences were found in average pain, worst pain, or morphine equivalent dosage post-procedure. |                                       |                             |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/25825138/">https://pubmed.ncbi.nlm.nih.gov/25825138/</a>  |                                       |                             |   |

# SPINE

# SPINE

| Author                      | Year Published  | Journal    | Type                  |  |
|-----------------------------|---|------------|-----------------------|---|
| Nabiyev                     | 2018  | Neurospine | Cross-Sectional Study |   |
| <b>Title</b>                | <i>Cryo-Compression Therapy After Elective Spinal Surgery for Pain Management: A Cross-Sectional Study With Historical Control</i>  |            |                       |   |
| <b>Publication Overview</b> | Study to analyze the analgesic efficacy of CC therapy in adult patients following lumbar spinal surgery.  |            |                       |   |
| <b>Summary Points</b>       | A positive association was found between CC therapy and accelerated improvement during early rehabilitation post-procedure compared with patients who were treated with narcotics only. |            |                       |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/30531660/">https://pubmed.ncbi.nlm.nih.gov/30531660/</a>   |            |                       |   |

| Author                      | Year Published  | Journal   | Type                |  |
|-----------------------------|---|---|---------------------|---|
| De Bie                      | 2021  | Orthopaedics & Traumatology, Surgery & Research | Retrospective Study |   |
| <b>Title</b>                | <i>Enhanced Recovery After Lumbar Fusion Surgery: Benefits of Using Game Ready©</i>   |   |                     |   |
| <b>Publication Overview</b> | Study to evaluate the impact of a CC device on post-procedure analgesia following lumbar fusion.  |   |                     |   |
| <b>Summary Points</b>       | A CC device is an effective method to control post-procedure pain in spine surgery. Device usage decreased the consumption of analgesics, limited blood loss, reduced the need for transfusions, and contributed to enhanced recovery post-procedure. |   |                     |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/33957322/">https://pubmed.ncbi.nlm.nih.gov/33957322/</a>   |   |                     |   |

# HIP & LEG

# HIP & LEG

| Author                      | Year Published  | Journal           | Type           |  |
|-----------------------------|---|-------------------|----------------|---|
| Leegwater                   | 2012  | Hip International | Clinical Trial |   |
| <b>Title</b>                | <i>Cryocompression Therapy After Elective Arthroplasty of the Hip</i>   |                   |                |   |
| <b>Publication Overview</b> | Study to evaluate the effects of combined CC in THA.  |                   |                |   |
| <b>Summary Points</b>       | The CC group reported lower morphine usage, shorter hospital admission times, and less wound discharge than control. Intermittent CC appeared to reduce post-procedure blood loss. No difference was found in post-procedure pain scores. |                   |                |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/23112075/">https://pubmed.ncbi.nlm.nih.gov/23112075/</a>   |                   |                |   |

| Author                      | Year Published   | Journal | Type                        |  |
|-----------------------------|--|---------|-----------------------------|---|
| Leegwater                   | 2017   | Injury  | Randomized Controlled Trial |   |
| <b>Title</b>                | <i>Postoperative Continuous-Flow Cryocompression Therapy in the Acute Recovery Phase of Hip Fracture Surgery- A Randomized Controlled Clinical Trial</i>   |         |                             |   |
| <b>Publication Overview</b> | Study to evaluate the efficacy of continuous flow CC therapy in the acute recovery phase following hip fracture surgery.   |         |                             |   |
| <b>Summary Points</b>       | A mild analgesic effect was observed at 72 hours post-procedure in patients who completed the continuous flow CC treatment schedule. Continuous flow CC therapy was not found to add value in the acute recovery phase post-procedure. |         |                             |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/29079365/">https://pubmed.ncbi.nlm.nih.gov/29079365/</a>  |         |                             |   |

| Author                      | Year Published   | Journal                             | Type              |  |
|-----------------------------|--|-------------------------------------|-------------------|--|
| Klaber                      | 2019   | Journal of Hip Preservation Surgery | Comparative Study |  |
| <b>Title</b>                | <i>Compressive Cryotherapy is Superior to Cryotherapy Alone in Reducing Pain After Hip Arthroscopy</i>   |                                     |                   |  |
| <b>Publication Overview</b> | Study to evaluate the effect of CC therapy in pain management and early discharge post-THA.  |                                     |                   |  |
| <b>Summary Points</b>       | The CC group reported lower pain scores during the early post-procedure phase and were discharged to home sooner when compared with the control group. A trend toward lower opioid analgesia usage was observed in the CC group. |                                     |                   |  |
| <b>Link to Manuscript</b>   | <a href="https://academic.oup.com/jhps/article/6/4/364/5610188">https://academic.oup.com/jhps/article/6/4/364/5610188</a>  |                                     |                   |  |

# HIP & LEG

| Author                      | Year Published  | Journal                                    | Type              |  |
|-----------------------------|---|--|-------------------|---|
| Leegwater                   | 2019  | Journal of Orthopedic Surgery and Research | Multicenter Study |   |
| <b>Title</b>                | <i>Continuous-Flow Cryocompression Therapy Penetrates to Bone Level in Hip Fracture Patients in a Numerical Simulation</i>  |  |                   |   |
| <b>Publication Overview</b> | Study to observe deep tissue temperature during CC in post-procedure hip fracture patients.   |  |                   |   |
| <b>Summary Points</b>       | CC-induced analgesia was found to originate likely from skin analgesia, rather than muscle- or bone-derived pain analgesia. CC reduces temperature up to 3 cm and reaches the bone in cachectic patients, which may have implications for bone tissue healing with prolonged treatment. |  |                   |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/30764844/">https://pubmed.ncbi.nlm.nih.gov/30764844/</a>   |  |                   |   |

| Author                      | Year Published   | Journal                                     | Type                       |  |
|-----------------------------|--|---|----------------------------|---|
| Munsch                      | 2022   | Journal of Clinical Orthopaedics and Trauma | Retrospective Cohort Study |   |
| <b>Title</b>                | <i>Patient-Specific Factors, But Neither Regional Anesthesia Nor Hip-specific Cryotherapy, Predict Postoperative Opioid Requirements After Hip Arthroscopy for Femoroacetabular Impingement (FAI) Syndrome</i>   |   |                            |   |
| <b>Publication Overview</b> | Study to evaluate whether regional nerve blocks, CC delivery systems or patient-specific factors predict post-procedure opioid requirements and pain scores post-THA.  |   |                            |   |
| <b>Summary Points</b>       | Patient-specific factors are strong predictors of post-procedure opioid requirements. Regional nerve blocks and CC delivery systems did not affect opioid prescription amounts, opioid refill requests, and pain-related office visits post-procedure. |   |                            |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/35378774/">https://pubmed.ncbi.nlm.nih.gov/35378774/</a>  |   |                            |   |

# KNEE

# KNEE

| Author                      | Year Published   | Journal                               | Type                        |  |
|-----------------------------|--|---------------------------------------|-----------------------------|---|
| Su                          | 2012   | The Journal of Bone and Joint Surgery | Randomized Controlled Trial |   |
| <b>Title</b>                | <i>A Prospective, Multi-Center, Randomised Trial to Evaluate the Efficacy of a Cryopneumatic Device on Total Knee Arthroplasty Recovery</i>  |                                       |                             |   |
| <b>Publication Overview</b> | Study to investigate the efficacy of a CC device on post-TKA recovery.   |                                       |                             |   |
| <b>Summary Points</b>       | The CC device group demonstrated higher satisfaction scores and a greater distances walked at 6 weeks post-procedure. The CC device decreases the need for narcotic medication from hospital discharge to 2 weeks post-procedure. No differences were found in ROM, VAS, adverse events or knee circumference at 6 weeks post-procedure. |                                       |                             |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/23118406/">https://pubmed.ncbi.nlm.nih.gov/23118406/</a>  |                                       |                             |   |

| Author                      | Year Published   | Journal                     | Type                        |  |
|-----------------------------|--|-----------------------------|-----------------------------|---|
| Waterman                    | 2012   | The Journal of Knee Surgery | Randomized Controlled Trial |   |
| <b>Title</b>                | <i>The Efficacy of Combined Cryotherapy and Compression Compared With Cryotherapy Alone Following Anterior Cruciate Ligament Reconstruction</i>                            |                             |                             |   |
| <b>Publication Overview</b> | Study to compare subjective and objective patient outcomes post-ACL reconstruction with CC versus traditional ice therapy.   |                             |                             |   |
| <b>Summary Points</b>       | CC post-ACL reconstruction demonstrates improved, short-term pain relief and a greater likelihood for independence from narcotic use when compared with cryotherapy alone. |                             |                             |   |

| <b>Title</b>                | <i>Compressive Cryotherapy Versus Cryotherapy Alone in Patients Undergoing Knee Surgery: A Meta-Analysis</i>   |              |               |
| <b>Publication Overview</b> | Study to compare the efficacy of CC versus cryotherapy for knee surgery patients.  |              |               |
| <b>Summary Points</b>       | CC is beneficial to patients undergoing knee surgery at the early rehabilitation stage. At the final rehabilitation stage, CC and cryotherapy alone demonstrated similar efficacy. |              |               |

| <b>Title</b>                | <i>Nonpharmacologic Pain Management and Muscle Strengthening Following Total Knee Arthroplasty</i>  |                             |        |
| <b>Publication Overview</b> | Study to review non-invasive and novel modalities for neuromodulation in the treatment of pain and muscular weakness post-TKA.  |                             |        |
| <b>Summary Points</b>       | CC may help alleviate post-TKA pain. Cryotherapy, among other modalities, is a potential adjunct to current standard-of-care pharmacologic treatments to address post-procedure pain and muscle weakness. |                             |        |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/26683980/">https://pubmed.ncbi.nlm.nih.gov/26683980/</a>   |                             |        |

| <b>Title</b>                | <i>Multifaceted Comparison of Two Cryotherapy Devices Used After Total Knee Arthroplasty: Cryotherapy Device Comparison</i>   |                    |                             |   |
| <b>Publication Overview</b> | Study to compare the efficacy of a CC device versus ice/gel pack cryotherapy wrap post-TKA.   |                    |                             |   |
| <b>Summary Points</b>       | The CC device group demonstrated similar objective patient outcomes and subjective patient satisfaction to the cryotherapy wrap group post-TKA. Hospital staff satisfaction and device costs favor the cryotherapy wraps. |                    |                             |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/27648792/">https://pubmed.ncbi.nlm.nih.gov/27648792/</a>   |                    |                             |   |

| <b>Title</b>                | <i>Rehabilitative Guidelines After Total Knee Arthroplasty: A Review</i>   |                         |                     |   |
| <b>Publication Overview</b> | Guideline to investigate the role of rehabilitative methods for post-TKA patients.   |                         |                     |   |
| <b>Summary Points</b>       | Most studies suggest that CC therapy is effective for postoperative pain relief and function, particularly as it decreases the metabolic activity of local tissues while providing external support and limiting the accumulation of soft-tissue swelling. |                         |                     |   |

| <b>Publication Overview</b> | Study to compare knee ROM at 21 days post-TKA between patients who used CC versus patients who used cryotherapy alone.   |                               |                             |   |
| <b>Summary Points</b>       | Both cryotherapy methods reported improved joint ROM, trophic changes, pain and function. The CC group demonstrated a significantly faster improvement in passive knee flexion ROM, a greater reduction of swelling and lessened pain during activity. Walking distance and KOOS questionnaire were significantly better for the CC group. |                               |                             |   |

|-----------------------------|--|---|-------------------|---|
| Chan                        | 2016   | Asia-Pacific Journal of Sports Medicine, Arthroscopy, Rehabilitation and Technology | Comparative Study |   |
| <b>Title</b>                | <i>Comparison of Different Cryotherapy Recovery Methods in Elite Junior Cyclists</i>   |   |                   |   |
| <b>Publication Overview</b> | Study to compare 3 methods to facilitate recovery in elite junior cyclists.  |   |                   |   |
| <b>Summary Points</b>       | No significant difference between average power output, blood lactate, rating of perceived exertion, and heart rate for two time-trial bouts was found between CC therapy, cold water immersion and active recovery treatment. CC therapy, cold water immersion and active recovery treatment are all useful recovery protocols between exercise sessions. |   |                   |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/29264264/">https://pubmed.ncbi.nlm.nih.gov/29264264/</a>  |   |                   |   |

| <b>Title</b>                | <i>Passive Recovery Strategies After Exercise: A Narrative Literature Review of the Current Evidence</i>  |                                 |        |   |
| <b>Publication Overview</b> | Study to review the mechanisms and benefits for passive recovery strategies post-exercise to optimize athletic recovery.  |                                 |        |   |
| <b>Summary Points</b>       | Compression garments, cold water immersion, and partial body cryotherapy, among other passive recovery techniques, improve athletic recovery. Passive recovery techniques help minimize the negative effects of training and enable the athlete to more quickly return to peak performance. |                                 |        |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/34234090/">https://pubmed.ncbi.nlm.nih.gov/34234090/</a>   |                                 |        |   |

# RECOVERY & ATHLETICS

| Author                      | Year Published  | Journal          | Type              |  |

| <b>Title</b>                | <i>Effects of Contemporary Cryo-Compression on Post-Training Performance in Elite Academy Footballers</i>   |                  |                   |   |
| <b>Publication Overview</b> | Study to evaluate the immediate effects of CC on physiological and biomechanical measures in elite athletes following a fatiguing training session.   |                  |                   |   |
| <b>Summary Points</b>       | Variable responses following exposure to CC (compared to passive recovery) suggests targeted and individualized recovery strategies are essential. Significant reductions in neuromuscular performance immediately following exposure to pneumatic CC devices may discourage this recovery strategy if neuromuscular mechanisms are required in the short term. |                  |                   |   |

| <b>Title</b>                | <i>Effects of Cold Modality Application With Static and Intermittent Pneumatic Compression on Tissue Temperature and Systemic Cardiovascular Responses</i>   |               |                    |   |
| <b>Publication Overview</b> | Study to investigate whether higher levels of CC reduced tissue temperature and if cold modalities will cause acute increases in cardiovascular strain.  |               |                    |   |
| <b>Summary Points</b>       | The application of CC did not produce acute cardiovascular strain that exceeded the strain produced by standard ice bags/elastic wrap treatment. Greater temperature decreases were achieved with medium- and high-pressure settings when using the CC system. |               |                    |   |

| <b>Title</b>                | <i>Mechanisms and Efficacy of Heat and Cold Therapies For Musculoskeletal Injury</i>   |                       |        |   |
| <b>Publication Overview</b> | Study to review the mechanisms of action, physiological effects, and clinical evidence that supports the clinical use of heat and cold therapies.  |                       |        |   |
| <b>Summary Points</b>       | The physiological effects of cold therapy include reductions in pain, blood flow, edema, inflammation, muscle spasm, and metabolic demand. Some evidence supports the use of cold therapy following acute musculoskeletal injury and DOMS. |                       |        |   |

| <b>Title</b>                | <i>Cold-Induced Vasoconstriction May Persist Long After Cooling Ends: An Evaluation of Multiple Cryotherapy Units</i>   |  |                             |   |
| <b>Publication Overview</b> | Study to investigate the magnitude and persistence of vasoconstriction associated with cryotherapy.   |  |                             |   |
| <b>Summary Points</b>       | Cryotherapy can create a deep state of vasoconstriction in the local area of treatment. The condition of reduced blood flow persists long after local temperatures have rewarmed towards the normal range. This indicates that maintenance of vasoconstriction is not directly dependent on the continuing existence of a cold state. |  |                             |   |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/24562697/">https://pubmed.ncbi.nlm.nih.gov/24562697/</a>   |  |                             |   |

| <b>Title</b>                | <i>Analysis of the Muscle Tissue of Wistar Rats Submitted to the Sciatic Nerve Compression Model and Cryotherapy</i>  |          |                  |   |
| <b>Publication Overview</b> | Study to compare the effects of right sciatic nerve compression and cryotherapy on muscle tissue.   |          |                  |   |
| <b>Summary Points</b>       | Nerve injury reduced strength and muscle trophism (weight, diameter and area). Cryotherapy delayed hypotrophy during its application, but this effect did not last after ceasing treatment. |          |                  |   |

| <b>Title</b>                | <i>Reproducibility of Skin Temperature Response After Cold Stress Test Using the Game Ready System: Preliminary Study</i>             |   |                   |  |
| <b>Publication Overview</b> | Study to investigate the reproducibility of lower limb skin temperature after a cold stress test using a CC device.                   |   |                   |  |
| <b>Summary Points</b>       | The cold stress test using a CC device showed a fair and good reproducibility, especially when the posterior leg region was assessed. |   |                   |  |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/34444044/">https://pubmed.ncbi.nlm.nih.gov/34444044/</a>                                     |   |                   |  |

| <b>Title</b>                | <i>Effects of 7 Consecutive Systematic Applications of Cryotherapy With Compression</i>  |                                  |                  |   |
| <b>Publication Overview</b> | Study to investigate the occurrence of frostbite and measure skin temperatures during the systematic application of 2 CC protocols.  |                                  |                  |   |
| <b>Summary Points</b>       | The application of 7 consecutive CC treatments did not result in any signs or symptoms of frostbite. These applications produced similar skin temperatures with each active cycle. |                                  |                  |   |

# REVIEW & CLINICAL EDUCATION

| Author                      | Year Published  | Journal                       | Type                |
|-----------------------------|---|-------------------------------|---------------------|
| Hsu                         | 2019  | Journal of Orthopaedic Trauma | Clinical Guidelines |
| <b>Title</b>                | <i>Clinical Practice Guidelines For Pain Management in Acute Musculoskeletal Injury</i>   |                               |                     |
| <b>Publication Overview</b> | Guideline to provide recommendations to improve the management of acute pain following musculoskeletal injury.  |                               |                     |
| <b>Summary Points</b>       | Balancing comfort and patient safety following acute musculoskeletal injury is possible when utilizing a true multimodal approach. Cryotherapy for acute musculoskeletal injury and the postsurgical orthopedic patient is conditionally recommended as an adjunct to other post-procedure pain treatments. |                               |                     |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/30681429/">https://pubmed.ncbi.nlm.nih.gov/30681429/</a>   |                               |                     |

| <b>Title</b>                | <i>"Everything Old Is New Again": A Review of Current Complementary and Alternative Medicine Trends</i>  |                           |        |
| <b>Publication Overview</b> | Study to review complementary and alternative medicine therapies that can be used as adjunct or preventative treatment methods to provide holistic care.   |                           |        |
| <b>Summary Points</b>       | Cryotherapy is indicated for pain relief in inflamed, injured, or overused muscles. It is often used in sports medicine for injury recovery and postseason recovery. Due to effects of decreased fatigue and stress, cryotherapy is also useful to promote overall wellness. |                           |        |

| <b>Title</b>                | <i>Orthopaedic Application of Cryotherapy: A Comprehensive Review of the History, Basic Science, Methods, and Clinical Effectiveness</i>  |              |        |
| <b>Publication Overview</b> | Study to review the history, science, methods and clinical efficacy of cryotherapy in orthopedics.  |              |        |
| <b>Summary Points</b>       | Cryotherapy helps reduce the production of inflammatory mediators, local edema and nerve conduction velocity while disrupting the overall inflammatory response. Continuous cryotherapy devices demonstrated the best outcome in post-TKA patients with a significant reduction in pain, swelling and analgesic consumption while increasing ROM. |              |        |
| <b>Link to Manuscript</b>   | <a href="https://pubmed.ncbi.nlm.nih.gov/33512971/">https://pubmed.ncbi.nlm.nih.gov/33512971/</a>   |              |        |
